PIPELINE TRENCHING STARTED

Stealth Energy Inc. (the “Company” or “Stealth”) is pleased to report that its natural gas feeder pipeline project in Stillwater, Montana is now well underway. The ‘rights of way’ for 9 miles have now been contracted, and the ‘tap in’ arrangement for the Saga Pipeline has been negotiated and is currently being formalized. A substantial portion of the ‘rights of way’ has been graded, and the 6” pipe has already been delivered to several way stations along the route in readiness for assembly. This week the trenching machine and pipe fuser will be on site to commence laying the all weather pipeline at a depth of five feet. The objective is to complete this project in approximately thirty days with an initial capacity of 450,000 cubic feet of gas tapped to the Saga Pipeline. With an increase in compression the feeder pipeline has an ultimate capacity of 3,000,000 cubic feet.

Stealth Energy Inc. is a producing oil & gas company with its field office in Billings, Montana, USA. The company develops its own properties and continues to seek and make acquisitions, primarily within Montana and Wyoming. For further information please contact Carlo Nigro at (604) 669-7831 or stealthenergy@telus.net.
